1. Scope

This specification is applied to Multilayer Ceramic Chip Capacitor(MLCC) for use in electric equipment for the voltage is ranging from 4V to 50V.

The series suitable for general electrics circuit, telecommunications, personal computers and peripheral, power circuit and mobile application. **(This product is compliant with the RoHS & HF.)**

2. Parts Number Code

C	1206	U	104	J	050	T
(1)	(2)	(3)	(4)	(5)	(6)	(7)

(1)Product

Product Code	
C	Multilayer Ceramic Chip Capacitor

(2)Chip Size

Code	Length×Width unit : mm(inch)
1206	**3.20× 1.60 (.126× .063)**

(3)Temperature Characteristics

Code	Temperature Characteristic	Temperatue Range	Temperature Coefficient
U	**U2J**	**-55℃~+25℃**	**-750+120-347ppm/℃**
		+25~+125℃	**-750±120 ppm/℃**

(4)Capacitance

unit :pico farads(pF)

Code	Nominal Capacitance (pF)
104	**100,000.0**

※. *If there is a decimal point, it shall be expressed by an English capital letter R*

(5)Capacitance Tolerance

Code	Tolerance	Nominal Capacitance
J	**± 5.00 %**	**More Than 10 pF**

(6)Rated Voltage

Code	Rated Voltage (Vdc)
050	**50**

(7)Tapping

Code	Type
T	**Tape & Reel**

3. Nominal Capacitance and Tolerance

3.1 Standard Combination of Nominal Capacitance and Tolerance

Characteristic	Tolerance	Nominal Capacitance
U2J	**J (± 5.00 %)**	**E-12, E-24 series**

3.2 E series(standard Number)

Standard No.	Application Capacitance											
E- 3	1.0				2.2				4.7			
E- 6	1.0		1.5		2.2		3.3		4.7		6.8	
E-12	1.0	1.2	1.5	1.8	2.2	2.7	3.3	3.9	4.7	5.6	6.8	8.2
E-24	1.0	1.2	1.5	1.8	2.2	2.7	3.3	3.9	4.7	5.6	6.8	8.2
	1.1	1.3	1.6	2.0	2.4	3.0	3.6	4.3	5.1	6.2	7.5	9.1

4. Operation Temperature Range

Characteristic	Temperature Range	Reference Temp.
U2J	**-55℃ ~ +125℃**	**25℃**

5. Storage Condition

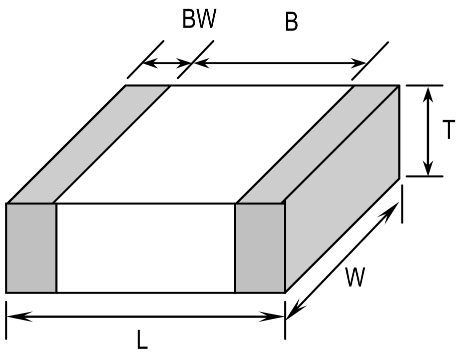
Storage Temperature：5 to 40℃

Relative Humidity：20 to 70 %

Storage Time：12 months max.

6. Dimensions

6.1 Configuration and Dimension：



Unit:mm

TYPE	L	W	T	B (min)	BW (min)
1206	3.20± 0.30	1.60± 0.20	1.60± 0.20	1.50	0.30

6.2 Termination Type：

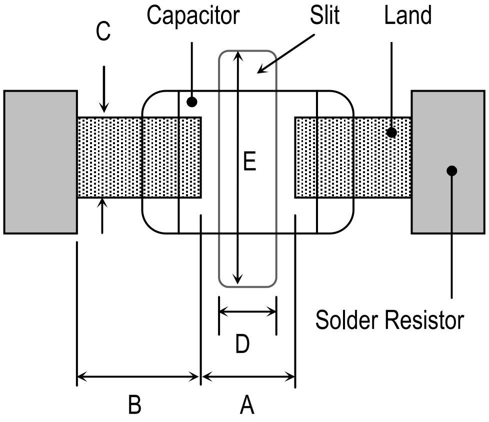
Precautionary Notes:

1. Storage

Store the capacitors where the temperature and relative humidity don't exceed 40℃ and 70%RH. We recommend that the capacitors be used within 12 months from the date of manufacturing. Store the products in the original package and do not open the outer wrapped, polyethylene bag, till just before usage. If it is open, seal it as soon as possible or keep it in a desiccant with a desiccation agent.

2. Construction of Board Pattern

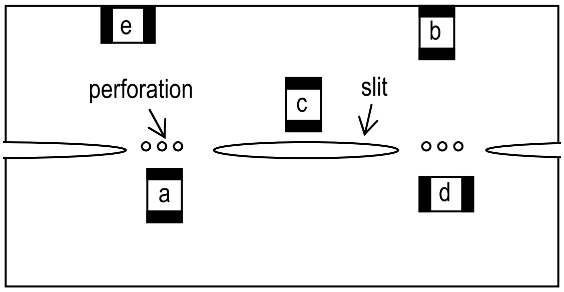
Improper circuit layout and pad/land size may cause excessive or not enough solder amount on the PC board. Not enough solder may create weak joint, and excessive solder may increase the potential of mechanical or thermal cracks on the ceramic capacitor. Therefore we recommend the land size to be as shown in the following table: 2.1 Size and recommend land dimensions for reflow soldering



EIA Code	Chip (mm)		Land (mm)				
	L	W	A	B	C	D	E
0201	0.60	0.30	0.2~0.3	0.2~0.4	0.2~0.4	--	--
0402	1.00	0.50	0.3~0.5	0.3~0.5	0.4~0.6	--	--
0603	1.60	0.80	0.4~0.6	0.6~0.7	0.6~0.8	--	--
0805	2.00	1.25	0.7~0.9	0.6~0.8	0.8~1.1	--	--
1206	3.20	1.60	2.2~2.4	0.8~0.9	1.0~1.4	1.0~2.0	3.2~3.7
1210	3.20	2.50	2.2~2.4	1.0~1.2	1.8~2.3	1.0~2.0	4.1~4.6
1808	4.60	2.00	2.8~3.4	1.8~2.0	1.5~1.8	1.0~2.8	3.6~4.1
1812	4.60	3.20	2.8~3.4	1.8~2.0	2.3~3.0	1.0~2.8	4.8~5.3
1825	4.60	6.35	2.8~3.4	1.8~2.0	5.1~5.8	1.0~4.0	7.1~8.3
2208	5.70	2.00	4.0~4.6	2.0~2.2	1.5~1.8	1.0~4.0	3.6~4.1
2211	5.70	2.80	4.0~4.6	2.0~2.2	2.0~2.6	1.0~4.0	4.4~4.9
2220	5.70	5.00	4.0~4.6	2.0~2.2	3.5~4.8	1.0~4.0	6.6~7.1
2225	5.70	6.35	4.0~4.6	2.0~2.2	5.1~5.8	1.0~4.0	7.1~8.3

2.2 Mechanical strength varies according to location of chip capacitors on the P.C. board.
Design layout of components on the PC board such a way to minimize the stress imposed on the components, upon flexure of the boards in depanelization or other processes.

Component layout close to the edge of the board or the "depanelization line" is not recommended.
Susceptibility to stress is in the order of: a>b>c and d>e



2.3 Layout Recommendation

Example	Use of Common Solder Land	Solder With Chassis	Use of Common Solder Land With Other SMD
Need to Avoid			Recommendation			
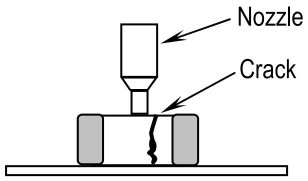
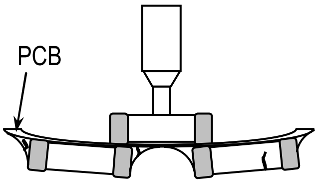
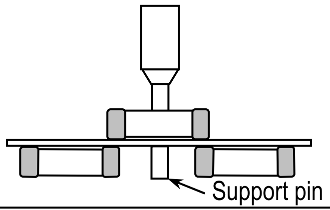
3. Mounting

3.1 Sometimes crack is caused by the impact load due to suction nozzle in pick and place operation.

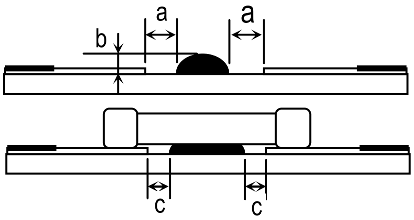
In pick and place operation, if the low dead point is too low, excessive stress is applied to component. This may cause cracks in the ceramic capacitor, therefore it is required to move low dead point of a suction nozzle to the higher level to minimize the board warp age and stress on the components. Nozzle pressure is typically adjusted to 1N to 3N (static load) during the pick and place operation.

Excessive Stress	Warping of Board	Warping of Board
		






3.2 Amount of Adhesive



Example : 0805 & 1206

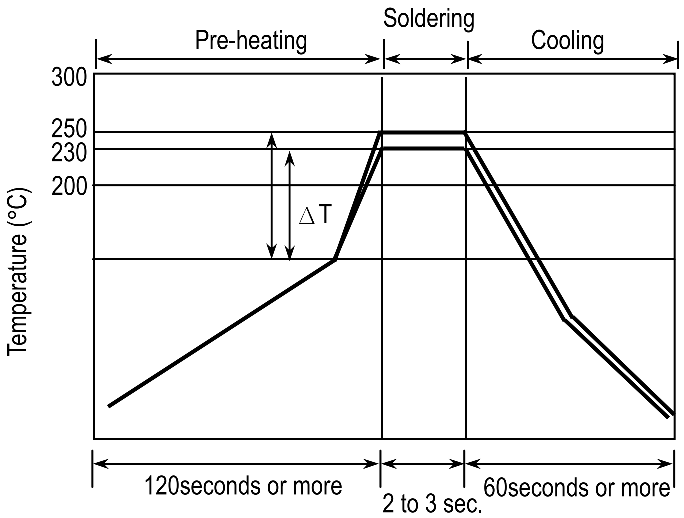
a	0.2mm min.
b	70 ~ 100 μm
c	Do not touch the solder land

4. Soldering

4.1. Wave Soldering

Most of components are wave soldered with solder at 230 to 250℃. Adequate care must be taken to prevent the potential of thermal cracks on the ceramic capacitors. Refer to the soldering methods below for optimum soldering benefits.

Recommend flow soldering temperature Profile



Soldering Method	Change in Temp.(℃)
1206 and Under	ΔT ≤ 100~130 max.

To optimize the result of soldering, proper preheating is essential:

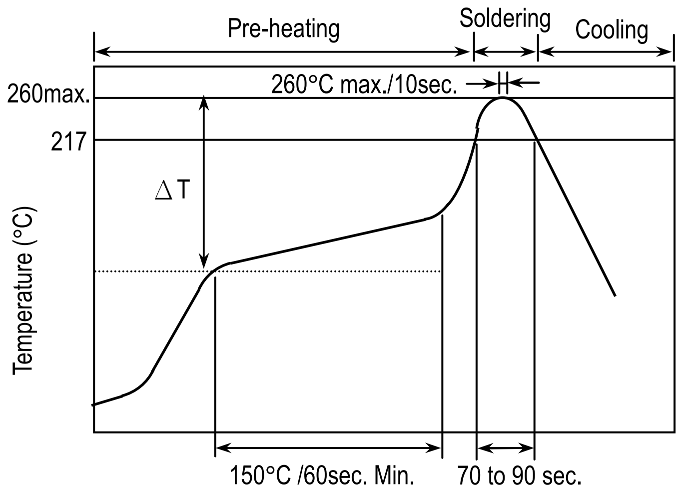
1) Preheat temperature is too low
    - a. Flux flows to easily
    - b. Possibility of thermal cracks
2) Preheat temperature is too high
    - a. Flux deteriorates even when oxide film is removed
    - b. Causes warping of circuit board
    - c. Loss of reliability in chip and other components

Cooling Condition:
Natural cooling using air is recommended. If the chips are dipped into a solvent for cleaning, the temperature difference (ΔT) between the solvent and the chips must be less than 100℃.

4.2 Reflow Soldering

Preheat and gradual increase in temperature to the reflow temperature is recommended to decrease the potential of thermal crack on the components. The recommended heating rate depends on the size of component, however it should not exceed 3℃/Sec.

Recommend reflow profile for Lead-Free soldering temperature Profile (MIL-STD-202G #210F)

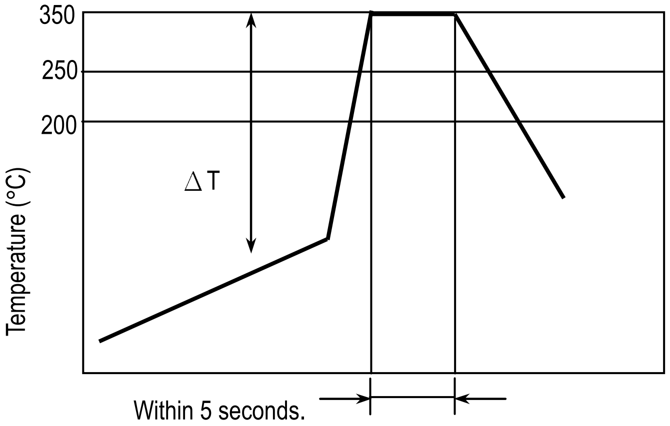


※ The cycles of soldering : Twice (max.)

Soldering Method	Change in Temp.(℃)
1206 and Under	ΔT ≦ 190 ℃
1210 and Over	ΔT ≦ 130 ℃

4.3 Hand Soldering

Sudden temperature change in components, results in a temperature gradient recommended in the following table, and therefore may cause internal thermal cracks in the components. In general a hand soldering method is not recommended unless proper preheating and handling practices have been taken. Care must also be taken not to touch the ceramic body of the capacitor with the tip of solder Iron.



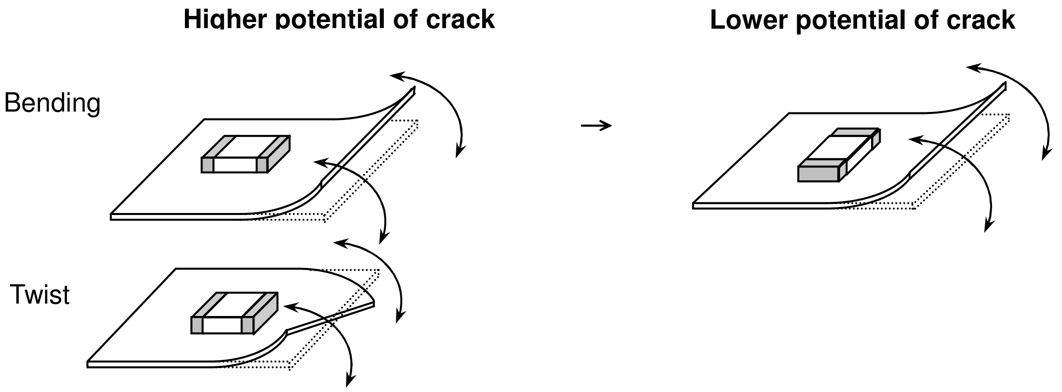
Soldering Method	Change in Temp.(℃)
1206 and Under	ΔT ≦ 150 ℃
1210 and Over	ΔT ≦ 130 ℃

How to Solder Repair by Solder Iron

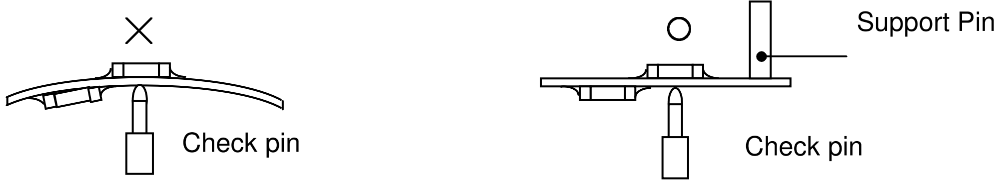
1) Selection of the soldering iron tip
   The required temperature of solder iron for any type of repair depends on the type of the tip, the substrate material, and the solder land size.
2) recommended solder iron condition
   - a.) Preheating Condition：Board and components should be preheated sufficiently at 150℃ or over, and soldering should be conducted with soldering iron as boards and components are maintained at sufficient temperatures.
   - b.) Soldering iron power shall not exceed 30 W.
   - c.) Soldering iron tip diameter shall not exceed 3mm.
   - d.) Temperature of iron tip shall not exceed 350℃ to perform the process within 5 seconds. (refer to MIL-STD-202G)
   - f.) Do not touch the ceramic body with the tip of solder iron. Direct contact of the soldering iron tip to ceramic body may cause thermal cracks.
   - g.) After soldering operation, let the products cool down gradually in the room temperature.

5. Handling after chip mounted

5.1 Proper handling is recommended, since excessive bending and twist of the board, depends on the orientation of the chip on the board, may induce mechanical stress and cause internal crack in the capacitor.



5.2 There is a potential of crack if board is warped due to excessive load by check pin

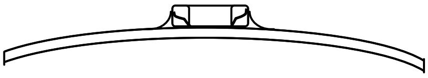


5.3 Mechanical stress due to warping and torsion.

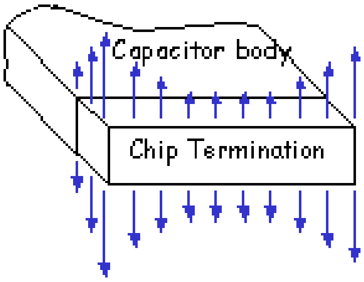
(a) Crack occurrence ratio will be increased by manual separation.

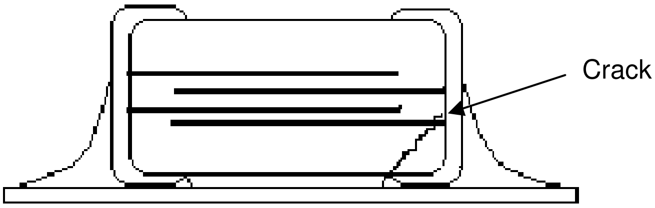
(b) Crack occurrence ratio will be increased by tensile force , rather than compressive force.

× :Tensile Stress ○ :Compressive Stress



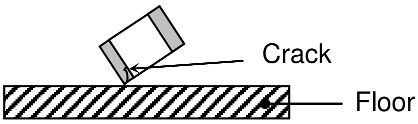
Capacitor Stress Analysis



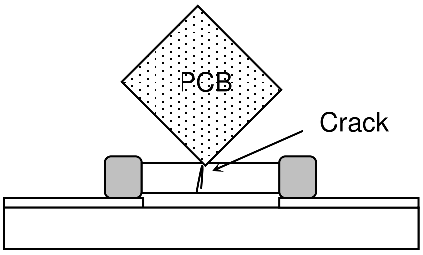


6. Handling of Loose Chip Capacitor

6.1 If dropped the chip capacitor may crack.



6.2 In piling and stacking of the P.C. boards after mounting for storage or handling, the corner of the P.C. board may hit the chip capacitor mounted on another board to cause crack.



7. Safekeeping condition and period

For safekeeping of the products, we recommend to keep the storage temperature between +5 to +40℃ and under humidity of 20 to 70% RH. The shelf life of capacitors is 12 months.
